Response to Arguments

Claim Objections

4. Claim 10 is objected to because of the following informalities: To avoid issues of a statutory nature, the language of the preamble should be re-worded to more effectively recite concrete inconnectivity between computer and media (e.g., "...media storing computer program instructions that cause a processor to evaluate..."). Appropriate correction is required.

Claim Rejections - 35 USC § 101

5. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

6. Claims 1-15 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 1-9 fall under the statutory category of a process. Current guidance suggests that a process must be tied to another statutory class (such as a particular apparatus) of transform underlying subject matter (such as an article or materials) to a different state or thing. Thus, to qualify as a § 101 statutory process, the claim should positively recite the other statutory class (the thing or product) to which it is tied, for example by identifying the apparatus that accomplishes the method steps.

Claims 10-15 are further rejected under 35 U.S.C. 101 because under new guidance, ‘for’ (e.g., instructions **for** performing) language fails to positively recite steps being performed on a computer or being processed by a processor.
